- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### 4.2 Quality and importance

E' un' area relativamente selvaggia caratterizzata da una buona varietà di ambienti e di flora. L'area rivela, tra l'altro, condizioni forestali di buona strutturazione e funzionalità ecologica provate dalla presenza, ad esempio, del Picchio nero, del Gallo cedrone e della Civetta capogrosso, sebbene questi ultimi con riscontri più limitati. Nel complesso l'area ospita una significativa frazione delle specie tipicamente montano-alpine dell'area lombarda, ad indicazione di un ambiente dai buoni livelli di qualità ecologica. Il popolamento ornitico (60 specie nidificanti totali) risulta variamente strutturato ecologicamente in termini di ricchezza specifica. L'erpetocenosi di questa vasta area comprende sia specie tipiche del piano montano sino a taxa propri dei piani subalpino e alpino. Per quanto concerne la mammalofauna quest'area presenta il popolamento con maggior diversità specifica. Buona è la presenza di Chiroteri ed Insettivori (con 5 e 8 specie rispettivamente), particolarmente sensibili e legate a condizioni di discreta qualità ambientale. In particolare di estrema rilevanza è il Toporagno alpino, specie rara e localizzata in Lombardia, tra gli Insettivori, e del Vespertilio mustacchino e del Serotino di Nilsson tra i Chiroteri.

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]
M	J02.06		b
M	G01.03.02		i
M	A04.03		i
M	K02.01		i
L	I02		b
M	F03.02.03		i

Positive Impacts			
Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
M	B02.05		i
M	G01.02		b
H	A04.02		i

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both
